Vuong Thanh An

Senior Unity Developer

Ho Chi Minh City, Vietnam 0906 462 961 thanhanforjob@gmail.com

Unity Developer with nearly 8 years of experience developing mobile and online games using Unity and C#. Experienced in gameplay implementation, gameplay architecture, Android performance optimization, runtime asset delivery, rendering optimization, and Unity Editor tooling. Also experienced in Unreal Engine 4 architectural visualization projects.

TECHNICAL SKILLS

Programming Languages
C#, Lua, C++, TypeScript

Architecture & Design
Gameplay Architecture, State Machine, Object-Oriented Design, Object Pooling

Profiling & Optimization
Unity Profiler, Memory Profiler, Frame Debugger, Android Optimization, Mesh Optimization, Occlusion Culling

AI-Assisted Development
Claude, ChatGPT, GitHub Copilot

Game Engines
Unity, Unreal Engine 4

Unity Development
Addressables, Remote Content Delivery, Custom Inspectors, Editor Tools, Shader Graph, Sprite Atlas

Development Tools
Git, Blender, Photoshop

PROFESSIONAL EXPERIENCE

PlayAd

May 2024 – January 2026

Unity Developer · Mobile Games

Racing Master

A mobile racing game featuring real-time vehicle racing and detailed 3D environments.

- Developed and maintained gameplay features for Android devices.
- Implemented Unity Addressables for remote content delivery in testing and live-update workflows, helping reduce the initial application build size.
- Set up on-demand asset loading to avoid loading unnecessary content and support scene-loading stability.
- Converted terrain into custom meshes with reduced vertex counts and split large environment meshes into smaller chunks for Occlusion Culling.
- Improved rendering efficiency by reducing unnecessary environment rendering in race scenes.

Unity · C# · Addressables · Mesh Optimization · Occlusion Culling · Android

Nut Guardian

A stationary survival shooter where players defend their position by shooting incoming enemies. Defeated enemies drop coins that players collect to upgrade their capabilities.

Stick Man Legend

A number-based tower puzzle game where players move between platforms and fight numbered enemies. Players can defeat an enemy and absorb its number when their own number is higher; choosing an enemy with a higher number results in defeat.

Sandwich Master

A casual order-fulfillment game where players tap the ingredient buttons in the sequence required by each generated order to assemble the requested sandwich, such as one with a fried egg, lettuce, and a tomato slice.

Frosty Drill

An endless mining game where players drill forward through a mine and must avoid rocks; hitting an obstacle ends the run. The goal is to dig for as long as possible and achieve a higher survival time.

Space Chasing

An endless space runner where players tap left or right to switch lanes, avoid incoming asteroids, and collect coins while moving through space.

Space Falcon Studio
June 2022 – May 2024

Unity Developer

Aviatrix

An online airplane shooter featuring combat, player abilities, and enemy encounters.

- Designed and implemented combat gameplay features, including shooting, player skills, enemy interactions, and combat UI.
- Resolved a 2D/3D targeting alignment issue by mapping 3D collider positions to 2D gameplay coordinates while accounting for the orthographic camera view.
- Contributed to gameplay performance improvements across supported devices and platforms.

Unity · C# · Gameplay Systems · Object Pooling · API Integration

Athena
February 2021 – February 2022

Unity Developer

Tile Home

A match-3 puzzle game where players select and match identical tiles to clear them from the board.

Bubble Shooter

A casual puzzle game where players shoot colored bubbles to match and clear groups of bubbles.

Helios
December 2020 – February 2021

Unity Developer

Werewolf Voice

An online social deduction game with voice-based multiplayer interaction.

- Implemented online chat, friend management, and in-game tutorial features.

English Learning Game

An educational game designed to support English-language learning.

- Implemented audio playback functionality and video previews for learning lessons.

Survivor.io

A survival action game focused on fighting waves of enemies.

- Supported the project through bug fixing and UI issue resolution.

Zen-Studio
August 2019 – December 2020

Game Developer

Drop the Ball

A casual physics game centered on dropping balls and using their bouncing movement as the core gameplay mechanic.

Pull the Pin

A physics-based puzzle game where players pull pins in the correct sequence to guide and rescue a character.

Animal Linking Game

A connect-the-animals puzzle game developed using TypeScript.

AnGia-Art
April 2018 – April 2019

Unreal Engine Developer

Architectural Visualization Walking Simulator

An Unreal Engine 4 ArchViz experience that allows users to explore interior spaces in a first-person walking simulation, with a focus on realistic lighting and visual presentation.

FREELANCE & PERSONAL PROJECTS

HalfWish

A multiplayer card-based game project.

- Developed card-based UI and player interaction features.
- Implemented card dragging and input feedback.
- Connected UI behavior with multiplayer gameplay state and fixed UI/gameplay issues during testing.

Unity · C# · Photon

Other Personal Projects

Solar System Simulation · Math & Equation Solver

EDUCATION

University of Science, VNU-HCM
