- State Machine
- Object Pooling

Vương Thành Ân

Unity Developer

I have 8+ years of experience in developing and optimizing mobile and online games. Experienced in building gameplay systems, ui, integrating backend APIs, and improving game performance across different devices.

Work Experiences

04/2018 - 01/2026

PlayAd – Mobile Games
05/2024 – 01/2026

Racing Master *Game Developer (Unity)*

- Developed and maintained core gameplay features for a mobile racing game using Unity.
- Implemented Addressables to deliver game content remotely for testing and live updates, significantly reducing initial build size.
- Used Addressables for on-demand asset loading, preventing scenes from loading excessive objects and improving scene load stability.
- Optimized race environments by converting terrain into custom meshes with reduced vertex counts.
- Split large environment meshes into smaller chunks to leverage Unity Occlusion Culling and minimize unnecessary rendering.
- Improved rendering efficiency to ensure only visible meshes were rendered, helping stabilize frame rate during high-speed races.
- Collaborated with team members using Git within an Agile development workflow.

Unity (C#) | Addressables | Occlusion Culling | Performance Optimization

- Nut Guardian, Stick Man Legend, Sandwich Master
- Frosty Drill, Space Chasing

Unity

Tools

- Profiling & Debugging
- Shader Graph
- Unity Editor Scripting (Custom Inspectors & Internal Tools)
- Addressables
- Sprite Atlas

Optimization

- Mobile Optimization
- Occlusion Culling

AI-Tools

- ChatGPT
- Copilot
- Prompt Engineering
- Documentation - Development Planning
- AI-assisted Coding - Context/Memory Management

Tools

- Git
- Blender
- Photoshop

Interests

Travel – HEMA Fencing – 3D Arts

Education

University of Science, VNU-HCM

Graduated

Space Falcon Studio
06/2022 – 05/2024

Aviatrix

Game Developer (Unity)

- Implemented combat gameplay systems including shooting, player skills, enemy interactions, and combat UI for a mid-core online airplane shooter.
- Solved 2D/3D targeting alignment issues by mapping 3D top-down collider positions to the equivalent 2D gameplay view, compensating for orthographic camera perspective distortion to ensure accurate enemy positioning.
- Optimized gameplay performance to ensure stable frame rates across different devices and platforms.
- Collaborated with team members using Git within an Agile development process.

Unity (C#) | Online Gameplay | Object Pooling | API Integration | Mobile & PC

- Second Mobile Game

Athena
02/2021 – 02/2022

- Developed hyper-casual mobile games.

Helios
12/2020 – 02/2021

- Developed multiplayer mobile games.

Zen-Studio
08/2019 – 12/2020

- Developed hyper-casual mobile games.

AnGia-Art
04/2018 – 04/2019

- Using unreal engine, Developed walking simulator games to help clients better visualize their interior house designs.

Freelancing Projects

HalfWish

Game Developer (Unity)

- Developed and maintained gameplay UI systems, including card-based interfaces and player interaction logic.
- Implemented card dragging mechanics with smooth visual feedback and responsive input handling.
- Collaborated with networked gameplay logic to ensure UI states remained synchronized in multiplayer sessions.
- Assisted in debugging gameplay and UI issues during development and playtesting.

Unity (C#) | Editor Scripting | Photon Networking

- Solar System Simulation
- Math & Equation Solver
